

scheduler

Production scheduling software

Intelligent scheduling & capacity planning system

Whether it's adapting to ongoing job changes, or accounting for planned and unplanned downtime, Fitfactory Scheduler takes the manual effort out of production planning. It prioritises jobs intelligently, gives you real-time visibility into shopfloor performance, and helps you spot recurring issues before they impact delivery. The result? Better resource management, improved customer satisfaction, and a more agile production environment that works for you, not the other way around.

Seamless scheduler integration

The MES Scheduler isn't just built for Fitfactory systems, it connects seamlessly with other systems too. Integration makes the Scheduler more than just a planning tool, it becomes the central hub for smarter manufacturing decisions.

Efficiently plan in uptime and downtime as it occurs

Intelligently prioritise jobs based on requirements

Automatically schedule the optimal layout to achieve outstanding delivery targets

Deliver with confidence

Improved visibility and control to help you meet customer deadlines.

Streamline your workflow

Reduce bottlenecks and simplify your daily operations.

Empower your team

Work smarter with tools that support productivity and growth.

Seamless integration for smarter scheduling

The MES Scheduler isn't limited to Tricorn, it can also be integrated with other systems, making it a powerful tool for any manufacturing setup. It automatically rearranges production to find the best sequence for meeting commitments and provides the insight needed to make informed delivery decisions. This flexibility helps you hit OTIF targets consistently and keep customers satisfied.

Real-time scheduling

The Scheduler links to SFDC and Production systems in real-time so it is always up to date with the latest information. Changes are calculated as your staff clock-on and off jobs, jobs are delayed by unforeseen problems, or you gain extra capacity.

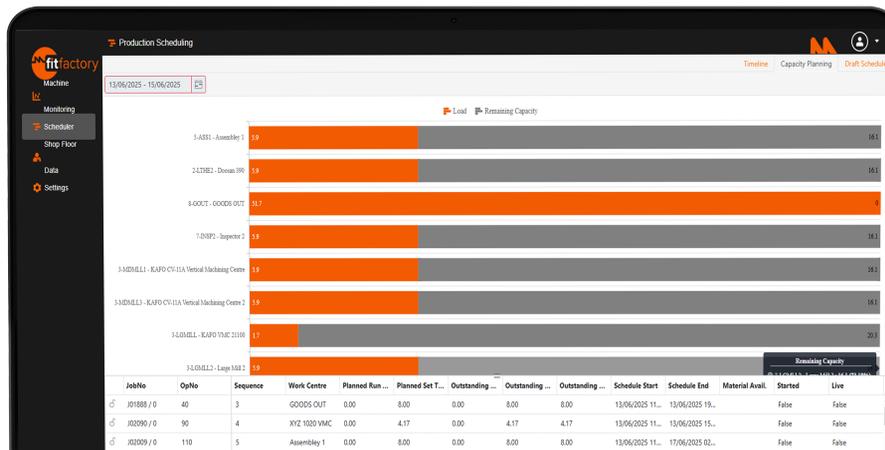

Track & manage resources

The Scheduler models all available resources, taking consideration of holidays, absences, shift patterns and subcontracting, to provide a complete overview of resource availability. As you utilise the system's what if modelling, the resources update to reflect those changes, helping to ensure you can always deliver on time and in full.

Dynamic business reporting

Collate live scheduling data from across your factory and feed it into your MRP dashboard. Generate reports on WIP, OTIF deliveries, and capacity to quickly spot issues and bottlenecks.

The intelligent way to make
your factory fit
