

Read-Only Client

IndySoft's Read-Only Client utilises the flexibility of the core client to provide quick and easy access to users only needing limited functionality. This allows commercial labs and enterprise users the capability to extend access to reports, searches and events to their customers or others in the organisation for a fraction of the cost of the full client.

Familiar Look & Feel

With the same state of the art look as the core IndySoft Client, users can quickly and easily navigate to the most utilised activities: reports, searches and printing of forms.

Strengthen Your Brand

Reinforce your brand by including your logo and colour scheme right in the Read-Only Client. Visual integration of IndySoft into your website is made easy since you can design the dashboard to match your website's look and feel.

Efficient Licensing

The IndySoft licensing system for Read-Only allows for pools of licenses per customer. You can also dedicate licenses to specific Read-Only customers so that key users are guaranteed access.

Common Event System

Users have the ability to execute custom events for common activities such as generating packing slips, updating equipment fields, notifying labs of incoming shipments, and request for pickup and on-site service lab requests.

Custom Charts & Reports

The dashboard can be customised to show charts of key metrics and data on a customer's home screen. Plus, the entire library of PrintBuilder reports and customer searches is visible, making reporting capabilities limitless.

Enhanced User Experience

Utilizing IndySoft's Layout Builder functionality, administrators can customise individual customer dashboards and views, enabling a customer-specific experience for end users.
